

WHAT TO DO IF YOU SEE A SUSPICIOUS DRONE

OFFICIAL UPDATES LU-Alert · RTL, 100.7 · 112

DO THIS NOW

- 1** Keep at least **150 m** metres away from the drone, whether it is flying, hovering low or lying on the ground.
- 2** Never touch, pick up or move a drone that has landed or crashed, or any part of one. Keep other people away from it too.
- 3** Call **112** if a drone has crashed, is flying over a crowd, or is close to an airport, a power plant or another critical site.
- 4** Report other suspicious drones, such as one that keeps filming a power, water or telecom site, to the police on **113**.
- 5** From a safe distance, note the time, the place, which way it flew, its size, its lights and its sound, and how many there were. Do not go closer for a better look or a photo.
- 6** Do not try to bring it down, block it or chase it. Leave that to the authorities.
- 7** If the authorities warn of a threat from the air, go indoors to a room with solid walls, away from windows, and follow LU-Alert and the radio on **RTL, 100.7**.

BEFORE

KNOW WHAT TO LOOK OUT FOR

- A drone on its own is not a threat. Many are flown for leisure, filming, farming or inspections. What matters is where it flies and how.
- Be alert to drones over airports, power plants, water works, telecom masts, military sites and large events, and for drones that keep coming back to film the same site.

- A government team assesses drone incidents in Luxembourg. Report what you see and let them assess the threat.

GET READY AT HOME

- Save **112** and **113** in your phone and in your **household plan**.
- Install the LU-Alert app and keep a battery or wind-up radio in the **emergency kit**. See **Alerts and sirens**.

- Know which room in your home has the most solid walls and the fewest windows.

IF YOU FLY A DRONE YOURSELF

- Keep well away from airports, critical sites and emergency scenes, so you do not trigger an alarm or get in the way of the rescue services.

AFTER

- If the police contact you, give them the details you noted, even ones that seem small.
- Share sightings with the police, not on social media. Do not post where the police

or rescue services are working.

- Check reports of drones against official sources before sharing them. See **False information**.

- If a drone incident closes the airport or roads, follow the official channels for updates.
- Feeling uneasy after a sighting is normal. Talk about it with the people around you.

IF YOU ARE...

LOOKING AFTER CHILDREN

- Tell them never to pick up a drone or a piece of one, even a toy-sized one, and to tell an adult at once.

OUT WALKING, FARMING OR IN THE

WOODS

- If you find a crashed drone or parts of one, keep your distance, remember the exact place, and call **112** from a safe spot.

AT WORK ON A CRITICAL SITE

- Report the drone to your site security as well as to the police, and follow your site's

own instructions.

OLDER, ILL, OR LIVING WITH A DISABILITY

- If you cannot move away quickly, stay where you are, keep others away and ask someone nearby to make the call.

EASY-READ SUMMARY

 Stay far away from the drone.

 Never touch a drone on the ground.

 Call for help if it crashes or flies near important places.

 Keep other people away too.

 If there is a warning, go inside and listen to the radio.
